IDENTITY AND INTEREST OF THE *AMICI CURIAE*¹

The California Policy Center and Wisconsin Institute for Law & Liberty are both nonprofit, nonpartisan public-interest entities that seek to protect economic liberty, private property rights, free speech, and other fundamental rights, including the fundamental right to parent under the Fourteenth Amendment.

INTRODUCTION AND SUMMARY OF ARGUMENT

The Escondido Union School District (the “District”)—like over a thousand other school districts around the country, covering more than 12 million students²—had a policy to secretly facilitate gender identity transitions at school and to require its teachers to hide this from parents who might disagree with this approach. School is now like Las Vegas: “What happens at school stays at school.” These policies have generated nearly 40 lawsuits, with many more to come. *See, e.g., Foote v. Ludlow Sch. Comm.*, No. 25-77 (filed July 18, 2025); *Littlejohn v. Sch. Bd. Of Leon Cty., Fla.*, No. 25-259 (filed Sept. 5, 2025). This is, undoubtedly, an issue “of great and growing national importance.” *Parents Protecting Our Children, UA v. Eau Claire Area Sch. Dist.*, 145 S. Ct. 14 (U.S., 2024) (Alito, J., dissenting from denial of certiorari).

These cases should be easy on the merits. As this Court has long recognized and recently reaffirmed, parents have a “constitutional right to make decisions concerning the rearing of [their] own [children],” *Troxel v. Granville*, 530 U.S. 57, 70

¹ No counsel for any party has authored this brief in whole or in part, and no entity or person, aside from *amici curiae* and its counsel, made any monetary contribution intended to fund the preparation or submission of this brief.

² *List of School District Transgender – Gender Nonconforming Student Policies*, Parents Defending Education, <https://bit.ly/4aiLjPW> (last updated April 21, 2025).

(2000) (plurality op.); *Mahmoud v. Taylor*, 606 U.S. 522 (2025). Any attempt by the government to “supersede parental authority” is both unconstitutional and “repugnant to American tradition.” *Parham v. J. R.*, 442 U.S. 584, 603 (1979). The “decisional framework” is what matters—government must apply a “presumption that a fit parent will act in the best interest of his or her child,” *Troxel*, 530 U.S. at 69 (plurality op.), and may only override parents after providing procedural due process and a sufficiently high substantive standard, such as “clear and convincing evidence” of harm or abuse, *id.*; *Santosky v. Kramer*, 455 U.S. 745 (1982). Government may not “transfer the power to make [a] decision from the parents to some agency or officer of the state,” “[s]imply because the decision of a parent is not agreeable to a child or because it involves risks.” *Parham*, 442 U.S. at 603. Yet that is exactly what school districts are doing—they are “transfer[ring] the power to [decide]” whether a social transition will benefit or harm a minor child from the parents to school staff and/or the children themselves.

Nevertheless, these cases are splitting the lower courts in all sorts of directions. Many have been evading the merits, whether by “questionable” applications of standing,³ the “shocks the conscience” test, municipal immunity,⁴ or other ancillary issues. When they reach the merits, some courts are mischaracterizing the issue as

³ *E.g.*, *Parents Protecting*, 145 S. Ct. 14 (Alito, J., dissenting from denial of certiorari); *John & Jane Parents 1 v. Montgomery Cnty. Bd. of Educ.*, 78 F.4th 622 (4th Cir. 2023).

⁴ *Lee v. Poudre School District R-1*, 135 F.4th 924 (10th Cir. 2025).

merely a matter of “curriculum.”⁵ Other courts and appellate jurists, however, have begun to recognize what should be obvious—these policies flagrantly usurp parental decision-making authority. *Infra* Part II.

In the meantime, children are being hurt by these policies—again, and again, and again. In Florida, a school district withheld from the parents that their 12-year-old was struggling with her gender identity, until she attempted suicide. Twice.⁶ Same story in Ohio—a school district withheld from parents that their daughter was struggling with gender dysphoria and that school staff were addressing her as if she were a boy, until she attempted suicide.⁷ In Colorado, a school district ran an after-school club that encouraged 12-year-olds to transition and to hide this from their parents, leading multiple girls into a months-long “emotional decline.” One attempted suicide.⁸ In Virginia, a school district withheld from the parents that their 14-year-old daughter had adopted a male identity and had begun using the boys’ bathroom at school, for which the boys harassed her. Due to the harassment, she ran away from home—and then was kidnapped, sex trafficked, and raped repeatedly.⁹ In Maine, school staff secretly gave a 13-year-old girl a chest binder,¹⁰ which can cause serious

physical damage.¹¹ In California, a school district secretly transitioned an *11-year-old* girl.¹² In Wisconsin, parents were forced to remove their 12-year-old daughter, who was struggling with various mental-health issues, from a school that refused to respect their decision about how their daughter should be addressed. After being removed from that environment, the daughter later reflected that the “affirmation” that she was actually a boy “really messed [her] up.”¹³

Despite many courts across the country ignoring fundamental Fourteenth Amendment parental rights, the district court in this case got it right. After extensive discovery and a fully developed record that included robust expert evidence, the district court correctly determined that District’s policy mandating secrecy against parents violated the United States Constitution and issued an order permanently enjoining California school districts from continuing to enforce such policies.

A social transition is a major, health-related decision with long-term implications. *Infra* Part I. And excluding parents from this decision violates their constitutionally protected decision-making authority. *Infra* Part II. Schools cannot give children a Tylenol without parental consent; facilitating a secret gender transition is far more serious. This Court should grant the Application and vacate the Ninth Circuit’s

interlocutory order staying the district court’s permanent injunction.

ARGUMENT

I. A Social Transition Is a Major Health-Related Decision That Requires Parental Involvement, for Many Reasons.

When children and adolescents express a desire to socially transition to a different gender identity (to change their name and pronouns to ones at odds with their natal sex), there is a major fork in the road, a decision to be made about whether a transition will be in the youth’s best interests. Parents must be involved in this decision, for many reasons.

First, there is an ongoing debate in the mental health community about how quickly and under what conditions children and adolescents who experience gender incongruence (a mismatch between their natal sex and perceived or desired gender identity) should transition socially. Childhood social transitions were “[r]elatively unheard-of 10 years ago” but have become far more frequent in recent years.¹⁴ Before the recent trend in some circles to immediately “affirm” every child’s and adolescent’s expression of a desire for an alternate gender identity, a robust body of research had found that, for the vast majority of children (roughly 80 to 90 percent), gender incongruence does not persist.¹⁵ As one researcher summarized, “every follow-up

¹⁴ James R. Rae, et al., *Predicting Early-Childhood Gender Transitions*, 30(5) Psychological Science 669–681, at 669–70 (2019), <https://doi.org/10.1177/0956797619830649>.

¹⁵ See, e.g., The World Professional Association for Transgender Health, *Standards of Care for the Health of Transsexual, Transgender, and Gender Nonconforming People* (“WPATH SOC7”) at 11 (Version 7, 2012), available at <https://gendergp.s3.eu-west-2.amazonaws.com/media/Standards-of-Care-V7-2011-WPATH.pdf>.

study of GD [gender diverse] children, without exception, found the same thing: Over puberty, the majority of GD children cease to want to transition.”¹⁶

These studies were conducted before the recent trend to quickly transition, whereas some newer studies of youth who *have* socially transitioned show much higher rates of persistence. A study in 2013 found that “[c]hildhood social transitions were important predictors of persistence, especially among natal boys.”¹⁷ Another recent study of 317 transgender youth found that 94% continued to identify as transgender five years after transitioning.¹⁸

Considering the vastly different rates of persistence between youth who transition and those who do not, many experts in the field are concerned that a social transition may affect the likelihood that a child’s or adolescent’s experience of gender incongruence will persist.

In the UK, for example, a recent, comprehensive review of the evidence by the National Health Service concluded that “social transition in childhood may change the trajectory of gender identity development for children with early gender

¹⁶ James M. Cantor, *Transgender and Gender Diverse Children and Adolescents: Fact-Checking of AAP Policy*, 46(4) *Journal of Sex & Marital Therapy* 307–313 (2019), <https://doi.org/10.1080/0092623X.2019.1698481>.

¹⁷ T. D. Steensma, et al., *Factors Associated with Desistence and Persistence of Childhood Gender Dysphoria: A Quantitative Follow-Up Study*, 52(6) *Journal of the American Academy of Child & Adolescent Psychiatry* 582–590, at 588 (2013), <https://doi.org/10.1016/j.jaac.2013.03.016>.

¹⁸ Kristina R. Olson, et al., *Gender Identity 5 Years After Social Transition*, 150(2) *Pediatrics* (Aug. 2022), <https://doi.org/10.1542/peds.2021-056082>.

incongruence.”¹⁹ This review also found that “those who had socially transitioned at an earlier age and/or prior to being seen in clinic were more likely to proceed to a medical pathway,” with all the associated risks and complications. In view of this evidence, the report concluded that “parents should be actively involved in decision making” about a social transition.²⁰

Dr. Kenneth Zucker, who for decades led “one of the most well-known clinics in the world for children and adolescents with gender dysphoria,” has argued that a social transition can “become[] self-reinforcing” because “messages from family, peers, and society do a huge amount of the work of helping form, reinforce, and solidify gender identities.”²¹ He has also written that “parents who support, implement, or encourage a gender social transition (and clinicians who recommend one) are implementing a psychosocial treatment that will increase the odds of long-term persistence.”²²

The authors of the 2013 study referenced above expressed concern that “the hypothesized link between social transitioning and the cognitive representation of

¹⁹ Hilary Cass, *Independent review of gender identity services for children and young people: Final report* at 31–32 (April 2024), <https://cass.independent-review.uk/home/publications/final-report/>.

²¹ Jesse Singal, *How the Fight Over Transgender Kids Got a Leading Sex Researcher Fired*, *The Cut* (Feb. 7, 2016), <https://www.thecut.com/2016/02/fight-over-trans-kids-got-a-researcher-fired.html>.

²² Kenneth J. Zucker, *The myth of persistence: Response to “A critical commentary on follow-up studies and ‘desistance’ theories about transgender and gender non-conforming children” by Temple Newhook et al.*, 19(2) *International Journal of Transgenderism* 231–245 (2018), available at <https://www.researchgate.net/publication/325443416>.

the self” may “influence the future rates of persistence,” while noting that this “possible impact of the social transition itself on cognitive representation of gender identity or persistence” had “never been independently studied,” Steensma (2013), *supra* n.17, at 588–89.

Another group of researchers recently wrote that “early childhood social transitions are a contentious issue within the clinical, scientific, and broader public communities. [citations omitted]. Despite the increasing occurrence of such transitions, we know little about who does and does not transition, the predictors of social transitions, and whether *transitions impact children’s views of their own gender.*” Rae (2019), *supra* n.14, at 669–70 (emphasis added).

The Endocrine Society’s guidelines similarly recognize that “[s]ocial transition is associated with the persistence of GD/gender incongruence as a child progresses into adolescence. It may be that the presence of GD/gender incongruence in prepubertal children is the earliest sign that a child is destined to be transgender as an adolescent/adult (20). However, social transition (in addition to GD/gender incongruence) has been found to contribute to the likelihood of persistence.”²³

The World Professional Association for Transgender Health (WPATH), which takes a decidedly pro-transitioning stance, has acknowledged that “[s]ocial transitions in early childhood” are “controversial,” that “health professionals” have

²³ Wylie C. Hembree, et al., *Endocrine Treatment of Gender-Dysphoric/Gender-Incongruent Persons: An Endocrine Society Clinical Practice Guideline*, Endocrine Society, 102(11) J Clin. Endocrinol. Metab. 3869–3903, at 3879 (2017), <https://doi.org/10.1210/jc.2017-01658>.

“divergent views,” that “[f]amilies vary in the extent to which they *allow* their young children to make a social transition to another gender role,” and that there is insufficient evidence “to predict the long-term outcomes of completing a gender role transition during early childhood.” WPATH SOC7, *supra* n.15, at 17.²⁴

In short, when a child or adolescent expresses a desire to change name and pronouns to another gender identity, mental health professionals do not universally agree that the best decision, for *every* such child or adolescent, is to immediately “affirm” their desire and begin treating that child or adolescent as the opposite sex. And whether transitioning will be helpful or harmful likely depends on the individual child or adolescent. As WPATH emphasizes, “an individualized approach to clinical care is considered both ethical and necessary.” WPATH SOC8, *supra* n.24, at S45.

While the mental health community continues to debate whether socially transitioning is generally beneficial or not, it is beyond dispute that there is currently little solid evidence about who is right, given how recent a trend this is. *See supra* n.24.

Even setting aside the debate about socially transitioning, there is near-universal agreement that, when a child or adolescent exhibits signs of gender incongruence (and a request to change name/pronouns would qualify), each should be considered

²⁴ The latest version continues to acknowledge “a dearth of empirical literature regarding best practices related to the social transition process.” *Standards of Care for the Health of Transgender and Gender Diverse People, Version 8*, WPATH, 23 International J. Trans. Health 2022 S1–S258, at S76 (2022), *available at* <https://www.tandfonline.com/doi/pdf/10.1080/26895269.2022.2100644>.

separately and individually and can benefit from the assistance of a mental health professional, for multiple reasons.

Every major professional association recommends a thorough professional evaluation to assess, among other things, the underlying causes of the child's or adolescent's feelings and consider whether a transition will be beneficial. The American Psychological Association, for example, recommends a "comprehensive evaluation" and consultation with the parents and youth to discuss, among other things, "the advantages and disadvantages of social transition during childhood and adolescence."²⁵ The Endocrine Society likewise recommends "a complete psychodiagnostic assessment." *Supra* n.23, at 3877. WPATH, too, recommends a comprehensive "psychodiagnostic and psychiatric assessment," covering "areas of emotional functioning, peer and other social relationships, and intellectual functioning/school achievement," "an evaluation of the strengths and weaknesses of family functioning," any "emotional or behavioral problems," and any "unresolved issues in a child's or youth's environment." WPATH SOC7, *supra* n.15, at 15.²⁶ WPATH also recommends that mental health professionals "discuss the potential benefits and risks of a social transition with families who are considering it." WPATH SOC8, *supra* n.24, at S69.

²⁵ American Psychological Association, *Guidelines for Psychological Practice With Transgender and Gender Nonconforming People*, 70(9) APA 832–864, at 843 (2015), <https://www.apa.org/practice/guidelines/transgender.pdf>.

²⁶ WPATH SOC8, *supra* n. 24, at S45, likewise states that "a comprehensive clinical approach is important and necessary," "[s]ince it is impossible to definitively delineate the contribution of various factors contributing to gender identity development for any given young person."

A professional assessment is especially important given the “sharp increase in the number of adolescents requesting gender care” recently, particularly among adolescent girls (“2.5-7.1 times” adolescent boys). WPATH SOC8, *supra* n.24, at S43. As WPATH acknowledges, an increasing number of “adolescents [are] seeking care who have not seemingly experienced, expressed (or experienced and expressed) gender diversity during their childhood years,” indicating that “social factors also play a role,” including “susceptibility to social influence.” *Id.* at S44–S45.

There is also growing awareness of adolescents who come to “regret gender-affirming decisions made during adolescence” and later “detransition,” which many find to be a “difficult[]” and “isolating experience.” *Id.* at S47. In one recent survey of 237 detransitioners (over 90% of which were natal females), 70% said they realized their “gender dysphoria was related to other issues,” and half reported that transitioning did not help.²⁷

Another reason for professional involvement is to assess whether the child or adolescent needs mental health support. Many experience dysphoria—psychological distress—associated with the mismatch between their natal sex and perceived or desired gender identity. Indeed, the American Psychiatric Association’s Diagnostic and Statistical Manual of Mental Disorders’ (DSM-V) official diagnosis for “gender dysphoria” is *defined by* “clinically significant distress.” *See What Is Gender*

²⁷ Elie Vandembussche, *Detransition-Related Needs and Support: A Cross-Sectional Online Survey*, 69(9) *Journal of Homosexuality* 1602–1620, at 1606 (2022), <https://doi.org/10.1080/00918369.2021.1919479>.

Dysphoria?, American Psychiatric Association.²⁸

Gender incongruence is also frequently associated with other mental health issues. WPATH's SOC8 surveys studies showing that transgender youth have higher rates of depression, anxiety, self-harm, suicide attempts, eating disorders, autism spectrum disorders, and other emotional and behavioral problems than the general population. *Supra* n.24, at S62–63. All major professional organizations recommend screening for these coexisting issues and treating them if needed. *Id.*; APA Guidelines, *supra* n.25, at 845; Endocrine Society Guidelines, *supra* n.23, at 3876.

Finally, professional support can be vital *during* any transition. A transition can “test [a young] person’s resolve, the capacity to function in the affirmed gender, and the adequacy of social, economic, and psychological supports,” and “[d]uring social transitioning, the person’s feelings about the social transformation (including coping with the responses of others) is a major focus of [] counseling.” Endocrine Society Guidelines, *supra* n.23, at 3877.

It should go without saying, but parents cannot obtain a professional evaluation, screen for dysphoria and other coexisting issues, or provide professional mental health support for their children, if their school hides from them what is happening at school.

To summarize, no professional association recommends that teachers and school officials, who have no expertise whatsoever in these issues, should facilitate a social

²⁸ American Psychiatric Association, *What is Gender Dysphoria?* <https://www.psychiatry.org/patients-families/gender-dysphoria/what-is-gender-dysphoria>.

transition while at school, treating minors as if they are really the opposite sex, in secret from their parents.

II. Parental Decision-Making Authority Includes the Right to Decide How One’s Own Minor Children Are Addressed at School.

A long line of cases from this Court establishes that parents have a constitutional right “to direct the upbringing and education of children under their control.” *Troxel*, 530 U.S. at 65 (plurality op.) (quoting *Pierce v. Soc’y of Sisters*, 268 U.S. 510, 534–35 (1925)); *Mahmoud*, 606 U.S. 522. This is “perhaps the oldest of the fundamental liberty interests recognized by this Court,” *Troxel*, 530 U.S. at 65 (plurality op.), and is “established beyond debate as an enduring American tradition,” *Wisconsin v. Yoder*, 406 U.S. 205, 232 (1972). It is a “basic civil right[] of man,” *Skinner v. Oklahoma*, 316 U.S. 535, 541 (1942), “far more precious ... than property rights,” *May v. Anderson*, 345 U.S. 528, 533 (1953).

This line of cases establishes four important principles with respect to parents’ rights. *See Mahmoud*, 505 U.S. 522 (holding that “[w]e have never confined *Yoder* to its facts”).

First, parents are the primary decision-makers with respect to their minor children—not their school, or even the children themselves. *Parham*, 442 U.S. at 602 (“Our jurisprudence historically has reflected ... broad parental authority over minor children.”); *Troxel*, 530 U.S. at 66 (plurality op.) (“[W]e have recognized the fundamental right of parents to *make decisions* concerning the care, custody, and control of their children.”) (emphasis added); *Yoder*, 406 U.S. at 232 (emphasizing the “primary role of the parents in the upbringing of their children”); *Mahmoud*, 606 U.S.

522 (parental authority “extends to the choices that parents wish to make for their children outside the home.”).

Parental decision-making authority rests on two core presumptions: “that parents possess what a child lacks in maturity, experience, and capacity for judgment required for making life’s difficult decisions,” *Parham*, 442 U.S. at 602, and that “natural bonds of affection lead parents to act in the best interests of their children,” far more than anyone else. *Parham*, 442 U.S. at 602; *Yoder*, 406 U.S. at 232 (“The history and culture of Western civilization reflect a strong tradition of parental concern for the nurture and upbringing of their children.”).

Second, parental rights reach their peak, and thus receive the greatest constitutional protection, on “matters of the greatest importance.” See *C.N. v. Ridgewood Bd. of Educ.*, 430 F.3d 159, 184 (3d Cir. 2005) (calling this “the heart of parental decision-making authority”); *Yoder*, 406 U.S. at 233–34. One such area traditionally reserved for parents is medical and health-related decisions. As this Court recognized long ago: “Most children, even in adolescence, simply are not able to make sound judgments concerning many decisions, including their need for medical care or treatment. Parents can and must make those judgments.” *Parham*, 442 U.S. at 603.

Third, a child’s disagreement with a parent’s decision “does not diminish the parents’ authority to decide what is best for the child.” *Parham*, 442 U.S. at 603–04. *Parham* illustrates how far this principle goes. That case involved a Georgia statute that allowed parents to voluntarily commit their minor children to a mental hospital

(subject to review by medical professionals). *Id.* at 591–92. A committed minor argued that the statute violated his due process rights by failing to provide him with an adversarial hearing, instead giving his parents substantial authority over the commitment decision. *Id.* at 587. The Court rejected the minor’s argument, confirming that parents “retain a substantial, if not the dominant, role in the [commitment] decision.” *Id.* at 603–04. “The fact that a child may balk at hospitalization or complain about a parental refusal to provide cosmetic surgery does not diminish the parents’ authority.” *Id.* at 604.

Fourth, the fact that “the decision of a parent is not agreeable to a child or ... involves risks does not automatically transfer the power to make that decision from the parents to some agency or officer of the state.” *Parham*, 442 U.S. at 603; *cf. Mahmoud*, 606 U.S. 522 (Thomas, J., concurring). Likewise, the unfortunate reality that some parents “act[] against the interests of their children” does not justify “discard[ing] wholesale those pages of human experience that teach that parents generally do act in the child’s best interests.” *Id.* at 602–03. The “notion that governmental power should supersede parental authority in *all* cases because *some* parents abuse and neglect children” is “statist” and “repugnant to American tradition.” *Id.* at 603 (emphasis in original). Thus, as long as a parent is fit, “there will normally be no reason for the State to inject itself into the private realm of the family to further question the ability of that parent to make the best decisions concerning the rearing of that parent’s children.” *Troxel*, 530 U.S. at 68–69 (plurality op.).

In accordance with these principles, courts have recognized that a school violates parents' constitutional rights if it attempts to usurp their role in significant decisions. In *Gruenke v. Seip*, 225 F.3d 290 (3d Cir. 2000), for example, a high school swim coach suspected that a team member was pregnant, and, rather than notifying her parents, discussed the matter with other coaches, guidance counselors, and teammates, and eventually pressured her into taking a pregnancy test. *Id.* at 295–97, 306. The mother sued the coach for a violation of parental rights, explaining that, had she been notified, she would have “quietly withdrawn [her daughter] from school” and sent her to live with her sister until the baby was born. *Id.* at 306. “[M]anagement of this teenage pregnancy was a family crisis,” she argued, and the coach’s “failure to notify her” “obstruct[ed] the parental right to choose the proper method of resolution.” *Id.* at 306. The court found that the mother had “sufficiently alleged a constitutional violation” against the coach and condemned his “arrogation of the parental role”: “It is not educators, but parents who have primary rights in the upbringing of children. School officials have only a secondary responsibility and must respect these rights.” *Id.* at 306–07.

The District’s policy violates parents’ decision-making authority in at least three different ways.

First, the policy violates parents’ constitutional right to make the decision about whether a social transition is in their child’s best interest. When children or adolescents experience gender dysphoria, whether they should socially transition is a significant and impactful health-related decision that falls squarely within “the

heart of parental decision-making authority,” *C.N.*, 430 F.3d at 184; *Parham*, 442 U.S. at 603. As described above, there is an ongoing debate among mental health professionals over how to respond when a child experiences gender incongruence, and, in particular, whether and when children should socially transition by being addressed as though they were the opposite sex.

The District’s policy takes this life-altering decision out of parents’ hands and places it with educators and young children, who lack the “maturity, experience, and capacity for judgment required for making life’s difficult decisions.” *Parham*, 442 U.S. at 602. By enabling children to transition at school, in secret from parents, without parental involvement, the District is effectively making a treatment decision without the legal authority to do so and without informed consent from the parents. Given the significance of changing gender identity, especially at a young age, parents “can and must” make this decision. *Parham*, 442 U.S. at 603.

A child’s fear that his or her parents might not support a transition is not sufficient to override their decision-making authority. Parents’ role is sometimes to say “no” to protect their children from decisions against their long-term interests.

Second, the District’s policy also violates parental rights by concealing a serious mental health issue from parents, circumventing their involvement altogether on this sensitive issue. *See Mahmoud*, 606 U.S. 522 (emphasizing that the district “will not notify parents when the books are being read”); *H. L. v. Matheson*, 450 U.S. 398, 410 (1981) (parents’ rights “presumptively include[] counseling [their children] on important decisions”); *Arnold v. Bd. of Educ. of Escambia Cnty., Ala.*, 880 F.2d 305,

313 (11th Cir. 1989). Parents cannot guide their children through difficult decisions without knowing what their children are facing. By allowing secrecy from parents about this one issue, the District's policy effectively substitutes school staff for parents as the primary source of input for children navigating difficult decisions, with long-term implications. *See Gruenke*, 225 F.3d at 306–07.

Third, the policy interferes with parents' ability to provide professional assistance that their children may urgently need. As explained above, gender dysphoria can be a serious psychological issue that requires support from mental health professionals. And gender incongruent children often present other psychiatric co-morbidities, including depression, anxiety, suicidal ideation and attempts, and self-harm. Teachers and staff do not have the training and experience necessary to properly diagnose children with gender dysphoria or to opine and advise on the treatment options. They cannot provide professional assistance for children dealing with these issues, and parents cannot obtain it either for their child if they are kept in the dark. Thus, parents must be notified and involved not only to make the decision about whether a social transition is in their child's best interest, but also to obtain professional support for their child.

Other courts and judges are beginning to recognize that policies to exclude parents from gender transitions at school violate parents' constitutional rights. In Wisconsin, parents were forced to remove their 12-year-old daughter, who was struggling with various mental health issues, from a school that refused to respect their decision about how their daughter should be addressed. After being removed from that

environment, the daughter changed her mind about wanting to transition, realizing that her struggle with her gender was related to other issues. *Supra* n.13. The parents sued their school district, and a Wisconsin court held that the district violated their parental rights. *T.F. v. Kettle Moraine Sch. Dist.*, No. 21-CV-1650, 2023 WL 6544917 (Wis. Cir. Ct. Oct. 3, 2023). As the Court put it, “The School District could not administer medicine to a student without parental consent. The School District could not require or allow a student to participate in a sport without parental consent. Likewise, the School District [cannot] change the pronoun of a student without parental consent without impinging on a fundamental liberty interest of the parents.” *Id.* The Court enjoined the District from “allowing or requiring staff to refer to students using a name or pronouns at odds with the student’s biological sex, while at school, without express parental consent.” *Id.*

The district court in this case got it right when it previously held that parents “have a constitutional right to be accurately informed by public school teachers about their student’s gender incongruity that could progress to gender dysphoria, depression, or suicidal ideation, because it is a matter of health.” *Mirabelli v. Olson*, 761 F. Supp. 3d 1317, 1332 (S.D. Cal. 2025). Another district court granted a preliminary injunction against such a policy, after which the case settled. As that court put it, a parent’s “constitutional right includes the right ... to have an opinion and to have a say in what a minor child is called and by what pronouns they are referred.” *Ricard v. USD 475 Geary Cnty., KS Sch. Bd.*, No. 5:22-cv-4015, 2022 WL 1471372 (D. Kan. May 9, 2022).

There is also a growing chorus of appellate judges who have criticized similar policies in cases where the majority resolved the case on some ground other than the merits. Judge Niemeyer, for example, wrote that a similar policy was “effectively a nullification of the constitutionally protected parental rights,” by “granting the school the prerogative to decide what kinds of attitudes are not sufficiently supportive for parents to be permitted to have a say in a matter of central importance in their child’s upbringing.” *John & Jane Parents 1*, 78 F.4th at 646 (Niemeyer, J., dissenting) (the majority concluded the parents lacked standing). Judge Thapar, in an appeal dismissed solely for lack of a final, appealable order, called a similar policy “beyond troubling.” *Kaltenbach*, 2025 WL 1147577, at *1 (Thapar, J., concurring).

Judge McHugh wrote that a school policy “to help students conceal their gender identities from their parents” “impedes parents’ longstanding, fundamental right.” *Lee*, 135 F.4th at 936–38 (McHugh, J., concurring). “While the district may disagree with how some parents may react when they learn about their children’s gender identities, the district may not seize control of a child’s upbringing based on a ‘simple disagreement’ about what is in the child’s best interests.” *Id.* (Judge McHugh concurred with the majority, however, that the policy was not a sufficient cause of the plaintiff’s injuries to support a *Monell* claim.)

Three Justices of the Wisconsin Supreme Court, in yet another case similar to this one, reasoned that “social transitioning is a healthcare choice for parents to make,” and that putting a school district “in charge of enabling healthcare choices without parental consent” deprives parents of their constitutionally protected “decision-

making [authority] for their children.” *Doe 1 v. Madison Metro. Sch. Dist.*, 2022 WI 65, ¶¶ 89, 92, 94, 403 Wis. 2d 369, 976 N.W.2d 584 (Roggensack, J., dissenting) (again, the majority did not reach or discuss the merits).

Judge Benitez’s decision permanently enjoining policies that facilitate keeping secrets from—or even lying to—parents about their child’s gender is in line with this Court’s previous rulings that affirm parents have fundamental rights that cannot be overshadowed by teachers who have ideological differences.

CONCLUSION

The Court should grant the Application and vacate the Ninth Circuit’s interlocutory order staying the district court’s injunction.
